Hot Now

- **Technology** — Strong positive momentum across 1d, 5d, and 1m, with 1m gains above 20%.
- **Consumer Discretionary** — Positive returns across all timeframes, though 1d slightly negative, but 1m gain of 3.5%.
- **Industrials** — Consistent positive returns across timeframes, with 1m gain of 1.9%.

Cold but Worth Watching

- **Energy** — Significant underperformance with negative returns across all timeframes, but potential for mean-reversion given high volatility.

- **Utilities** — Negative returns across 1d, 5d, and 1m, but defensive sector may rebound if growth slows.
- **Consumer Staples** — Negative returns across 1d and 5d, flat 1m, but as a defensive sector, could attract flows in risk-off environment.

> Technology leads with strong momentum, while defensive sectors like Energy and Utilities lag, suggesting a risk-on environment with potential rotation into laggards.

💡 Daily Conclusion

> The dominant macro theme is a risk-on rotation into growth and cyclical sectors (Technology, Consumer Discretionary, Industrials) driven by strong manufacturing data, while energy and defensive sectors lag despite a record surge in US crude exports amid tightening global oil supplies.
