⚠️ Major Anomalies

ETH-USD — Ethereum `-7.75%`

Cause: Ethereum's steeper 7.75% decline outpaced Bitcoin as high-beta altcoin exposure unwound amid the same risk-off crypto sentiment, with ETH's higher volatility magnifying the selloff.

Forward Impact: ETH likely remains more volatile than BTC, with further downside if risk aversion persists but sharper rebound potential once crypto sentiment turns.

BTC-USD — Bitcoin `-5.55%`

Cause: Bitcoin's 5.55% drop reflects a broad risk-off crypto selloff, likely amplified by the post-midterm political uncertainty and hardliner Stephen Miller appointment raising regulatory/geopolitical concerns, with no crypto-specific catalyst in the headlines.

Forward Impact: Expect continued volatility and downside pressure near-term as traders await regulatory clarity and broader risk sentiment stabilization, with a possible relief bounce if equities steady.
