Major Anomalies

BTC-USD — Bitcoin +6.73%

Cause: Bitcoin surged on renewed risk-on appetite and speculation around favorable crypto policy/regulatory developments.

Forward Impact: BTC may extend gains if ETF inflows and regulatory clarity persist, but remains vulnerable to sharp risk-off reversals.

ETH-USD — Ethereum +5.05%

Cause: Ethereum rallied in sympathy with Bitcoin's broad crypto risk-on move, amplified by beta to the sector.

Forward Impact: ETH should continue tracking BTC direction while also reacting to ETF flow and network-upgrade news.

USO — Oil ETF -3.68%

Cause: Oil fell on easing Middle East supply-risk fears as diplomatic efforts around Iran progressed, outweighing geopolitical rhetoric.

Forward Impact: Continued de-escalation or OPEC+ supply increases would keep crude and USO under pressure.

XLK — Technology ETF +2.89%

Cause: Technology shares outperformed as the same bullish chip-stock analyst call lifted semiconductor and AI-related names that dominate the sector.

Forward Impact: XLK should stay highly sensitive to Nvidia/Broadcom guidance and any shift in AI capex sentiment.

QQQ — Nasdaq 100 ETF +2.88%

Cause: Broad-based tech-led rally, reinforced by bullish analyst commentary on AI chip leaders Nvidia and Broadcom, drove the Nasdaq 100 sharply higher.

Forward Impact: Momentum remains tied to AI/semiconductor earnings and rate expectations, so further upside depends on sustained chip-sector strength.
