Major Anomalies

USO — Oil ETF ^{+8.36%}

Cause: Oil surged on escalating US-Iran hostilities and threats to Hormuz shipping, raising supply disruption fears.

Forward Impact: Geopolitical tensions could keep oil elevated, but potential diplomatic resolutions may cap gains.

SLV — Silver ETF -3.32%

Cause: Silver fell more than gold due to its dual role as both a precious and industrial metal, with demand concerns from weaker economic outlook.

Forward Impact: Industrial demand uncertainty could keep silver under pressure unless growth picks up.

GLD — Gold ETF -2.62%

Cause: Gold dropped as risk appetite improved on softer inflation data and rising oil prices, reducing safe-haven demand.

Forward Impact: If inflation remains subdued and equities rally, gold may face further headwinds.

XLK — Technology ETF -2.42%

Cause: Technology sector fell amid profit-taking and rotation into value stocks, despite positive inflation data and bank earnings.

Forward Impact: Continued rotation may pressure tech in near term, but strong fundamentals could support recovery.

BTC-USD — Bitcoin -2.38%

Cause: Bitcoin fell as risk-off sentiment in tech spilled over into crypto, despite positive equity market tone.

Forward Impact: Correlation with tech stocks suggests further downside if tech weakness continues.

UNG — Natural Gas ETF -2.17%

Cause: Natural gas declined on mild weather forecasts reducing heating demand and ample storage levels.

Forward Impact: Seasonal demand weakness may persist, but any cold snap could trigger a rebound.

Hot Now

- **Energy** — Energy shows strong 1d and 5d momentum, likely driven by oil price rally
- **Financials** — Financials have solid 1m performance and positive 1d, benefiting from higher rates
- **Utilities** — Utilities are defensive with positive returns across all timeframes, indicating risk-off demand

Cold but Worth Watching

- **Technology** — Technology has negative 1d and 5d, but 1m still positive; potential bounce if growth fears ease

- **Consumer Discretionary** — Consumer Discretionary weak across timeframes, but oversold conditions may attract dip buyers
- **Materials** — Materials negative 1d and 5d, but 1m positive; mean-reversion possible if commodity prices stabilize

Markets show rotation from growth to value and defensive sectors, with energy surging on supply concerns while tech and consumer discretionary lag.

Daily Conclusion

Risk-off rotation into energy, gold, and defensive sectors dominates as geopolitical supply shocks overshadow a broad selloff in technology and consumer discretionary.
