Major Anomalies

USO — Oil ETF -2.29%

Cause: Oil prices fell as traders weighed softer global demand signals against ample supply, with no major geopolitical supply disruption to support crude.

Forward Impact: USO may stay under pressure if demand concerns persist and OPEC+ supply remains steady, though any Middle East escalation could quickly reverse the move.

BTC-USD — Bitcoin +2.03%

Cause: Bitcoin rallied on renewed risk appetite tied to AI-driven tech optimism and expectations of looser monetary policy, drawing speculative flows into crypto.

Forward Impact: BTC could extend gains if tech momentum and rate-cut hopes continue, but a hawkish Fed surprise or risk-off shift would likely trigger a sharp pullback.

- **Utilities (XLU)** — Utilities are down -6.4% 1m yet positive over 5d and 1d, showing early relative stabilization that could precede a defensive rotation.
